

# The Tragic Meteor

By: Joshua Chang

## Mission 1: Introduction<sup>1</sup>

**I**n the year 2373 A.D.E. everybody had gathered in Antarctica because of global warming. There they established a new place for people to live.

Everybody in the world gathered together, thus uniting the people in the world. This would eventually become a problem for the people of the future, but currently the people were happy. They were still alive. This story takes place during a great struggle during the year 2783 A.D.E.

In the year 2783 A.D.E. in the continent Antarctica, in the country Artini, and in the city Anbonia two scientist were looking into space with H.A.M.S.T.E.R. (Hyper Atomic Missile Space Time Eating Rocks (the H.A.M.S.T.E.R. is a giant

---

<sup>1</sup> When I mean mission I mean chapter.

hamster looking machine that is floating in space that sends incredible images of space) one of the scientist is named Arthur, he has short light brown hair. His hairstyle was a duckbill hairstyle. His face was usually filled wrinkles, because being a perfectionist makes him restart a lot of things, because they're not perfect and he always wants to finish it making him not have enough sleep. He had blue eyes. Arthur has a slim body, because he keeps on running out of materials to create things so he runs around to get materials, and he doesn't want any help from other people. Arthur is usually seen in his scientist uniforms (white jacket, black long pants, and black shoes) and wearing his glasses which are colored red.

The other scientist next to Arthur is Olav he has mid-long hair. He has a bowl cut hairstyle. Unlike Arthur, Olav's face is not wrinkly, because he is not a perfectionist. Olav has black eyes, and a slim body. He is usually seen wearing his scientist uniforms, because he considers the newest clothing (science uniforms) are the "safest".

## Mission 2: The destruction of our future

**A**rthur and Olav were looking at  
outer space through the  
H.A.M.S.T.E.R.

“See anything new at  
your end Olav!?” shouted Arthur with his volume  
amplifier because they were very far apart from  
each other.

“Negative. How ab...ab...ab...!”

“Ab...ab...ab...?!”

“A me...me...meteor!”

“A Meteor!?” shouted Arthur as he threw  
his volume amplifier down to the floor and ran to  
Olav.

“Move Olav!” Arthur ordered as he pushed  
Olav out of the way. “Where did you see it?”

“Look at the coordinates 2571, 9475.”

“I see it!”

“What should we do?” panicked Olav.

“We’re all going to die!”

“Calm yourself it’s okay, if you listen to me  
this won’t be a problem.”

“Okay deep breath he...hah...he...hah”

“First let’s find out when the meteor is going to crash,” explained Arthur. “Now quickly get all the scientist here via the A.N.D. (announcing news device)!” Quickly Arthur and Olav ran all the way to the A.N.D., which looks like a small silvery color box.

“Red alert this is not a drill. All scientists immediately come to Floor 12!” Olav screamed through the A.N.D. “A meteor’s headed toward Earth!”

“Olav don’t tell them that, oh well,” sighed Arthur as he turned around, “Oh no!”

“What?”

“This A.N.D. is set on world-wide!”

“Oh no!”

## Mission 3: The separation of the duo

““W hat a meteor is headed  
toward the Earth!”  
cried a random man.  
“No I don’t

want to die!” cried a little girl.

“I’m too young to die!” cried a random  
woman.

“Noooooooo!” cried a little baby that just  
learned the word no.

“As you can see everybody in Antarctica is  
in chaos,” said Phil the news reporter of Channel  
5,431,123,235. “Why has the scientist of the space  
technology announced this to the world?”

“Move aside Phil!”

“Ah! Who are you?”

“I am Olav. Hello citizens of Antarctica.  
Please calm down. We are not in danger. We have  
a plan (hopefully) to stop the meteor, so like I said  
please calm down.”

“Err well that’s all folks! See you next time  
(if we’re alive) in news at Channel 5,431,123,235.”

Back at the station Arthur and the all the scientists were calculating the impact of the meteor.

“Hmm if  $X+23*12*B-A...$ ”mumbled Arthur.

“It looks like only Arthur can calculate this,” said one of the scientists.

“Yup,” agreed all of the scientists.

“I got it!” Screamed Arthur. “The meteor will crash on Earth in 4 days”

“What!” screamed the scientists.

“Actually more like 3 days 4 hours 32 minutes and... 12 seconds.”

“That’s even worse!” After a while Olav returned and then began a meeting deciding what to do about the meteor.

“I think we should go to some other continent,” said one of the newer scientists.

“No way you moron! If we do that we’ll burn to death, because of global warming<sup>2</sup>.” replied another scientist. “Well Arthur, have any plans?”

---

<sup>2</sup> Global warming is so bad unless you have a special suit you won’t survive. Animals had adapted to the heat.

“Yes if my calculations are correct, if we build a gigantic laser cannon with my instructions we should be able to destroy the meteor.”

“How long is the cannon going to take?”

“If you listen to me a day.” Olav had been listening for a while and didn’t like Arthur’s idea because of what would happen if something went wrong. They would only have 2 days left, and he was concerned about the safety of the citizens.

“Arthur,” stumbled Olav.

“Yes Olav?”

“I don’t like your idea. It could be dangerous, and...” shouted Olav, as he got braver and braver per word, like a starving chipmunk getting stronger with each walnut s/he eats.

“Well if you don’t like it what do you suggest?”

“Well....well I suggest we create space ships and leave Earth!”

“That’s a foolish idea. Who knows how many you need and how will you survive afterwards there’s no place for you to go!”

“I like my idea. We have the technology to do this quickly, and I’m getting sick and tired of

you being strict to everyone.” The scientists gasped with shock.

“Well whatever, we’re running out of time,” said Arthur backing up a bit. “Those that want to join me follow me!”

“I...I...I...If you want to do my idea, follow me,” shouted Olav as he and Arthur turned back against each other and walked away, like a destroyed duo.

## Mission 4: Arthur's plan

**A**rthur and his group of scientists left through the back door into an artificial forest. They could feel the cool wind blowing on their faces and how the forest was filled with fresh wet green trees that had been planted long ago for some animals to live.

“Sir, why are we here?” asked a scientist.

“We need material to make the laser cannon and this place is filled with discarded things from the past, and we can have better aim at the meteor when we finish the laser cannon,” replied Arthur. The group walked deeper into the forest.

“Okay this place is good,” said Arthur. They began unpacking and started construction on the cannon. Arthur was directing it, and everything was going fine until Arthur felt he was being watched. He looked around and saw a nearby bush moving. He knew it wasn't an animal, because if they wanted to they could have attacked them, and all of the animals are suppose to be friendly. Arthur gathered a few of his man and went to investigate the bush and decided to go investigate further.

“Found anything?” yelled a scientist.

“Nothing here!” replied another scientist.

After searching for 30 minutes Arthur gave up and started to return.

“Hey you guys you’ll have a code name from now on so that I don’t have to remember all of your names,” said Arthur as he was walking. “Once we get back numbers off starting from 0 then add an A in front of it.”

“Roger,” said a scientist. 15 minutes later Arthur and his group of scientists arrived back.

“Okay guys how’s the laser cannon coming along?” shouted Arthur. “What the-”

“What’s wrong sir?” asked a scientist as he looked at what Arthur was looking at.

“Ah! Bob what happened to you?” What they saw was a scientist named Bob, lying unconscious on the ground with a bleeding head.

“Get the first aid!” called a random scientist.

“Oh no,” murmured Arthur as he ran off.

“Sir what are you doing?!” called out a scientist, but Arthur was too deep in thought, like a deaf person to hear.

Later on, the scientists gathered all of the other scientists and looked for Arthur. They immediately found him at the laser cannon.

“Arthur have you gone mad!” cried a scientist while pointing at Arthur. “Why did you destroy the laser cannon!?”

“Hmm,” said Arthur looking quite entertained. “How do you know it’s destroyed? It’s true some parts are missing, but they aren’t visible so how would you know the parts are missing?”

“That’s true,” said the scientists.

“That means you’re trying to frame me, but I’m not stupid to fall for that trick.”

“You’re not as stupid as you look,” laughed the scientist. “Right I’m one of Olav’s scientist!”

“Olav’s!? I knew he didn’t like me, but why is he doing this!?” cried Arthur shocked.

“I’m going to send us to Kingdom Kong!” said Olav’s scientist as he grabbed 3 bombs and threw them at the laser cannon. It made a humongous explosion, as big as the moon.

“Ahhhhhh!!!!!!” cried everybody.

## Mission 5: Olav's plan

““W<sup>ow</sup> Olav, I knew one day somebody is going to tell Arthur he is too bossy and strict, but I never expected it to be you though,” said one of the scientist as he was following Olav.

“That’s true,” agreed another scientist.

“That’s not true. I just did what anyone else should have done,” commented Olav who just started walking on a path that was made out of tech metal (a new type of metal which is better then anything you can use to make paths). “Besides I didn’t like the laser cannon idea, it was too dangerous.”

“So umm Olav where are we going?” asked a scientist.

“Umm...” stumbled Olav as he tripped onto the floor.

“Oho oho,” cried a bird that was flying around.<sup>3</sup>

---

<sup>3</sup> Oho means idiot/ stupid in Japanese and sometimes in television when a character does something idiotic a bird would be flying by saying Oho oho (idiot/ stupid idiot/ stupid)

“Hey where did that bird come from?” asked a scientist. “They should be in the artificial forest that is filled with a lot of junk we threw away.”

“That’s it! We’ll go to the artificial forest!” cried Olav as he got up from the ground. “There should be a lot of parts to build the spaceships!”

“Yeah that’s another great idea from you, Olav the Coward!” laughed a scientist

“Thanks, hey that’s not funny!”

“Oh sorry I meant Olav the Former Coward.”

“HAHAHAHA,” laughed all of the entire scientists.

“Come on guys its not that funny!”

“Yeah, yeah we’re sorry.”

Later on the scientists arrived at the front door of the artificial forest. They went inside and went as far as they could go. Olav and his group started planning the amount and time, and constructing some spaceships. Everything was going fine until Olav noticed something in a bush nearby.

“Hey,” whispered Olav to a scientist, “is that bush moving a bit.”

“Hmm I believe it is Olav,” whispered back the scientist. “I know you’re worried. Let’s check it out.”

“Umm...” said Olav nervously slowly stepping backwards.

“I know I know, you’re scared, I’ll get other people,” said the scientist. And he did as he said he gathered five other scientists, and went to investigate the bushes.

“Hey guys!” cried Olav. “Once the other people come back we should create a codename system so I can call you each one individually.”

“Okay we’ll number off from 0 and add a O in the front,” laughed a scientist jokingly.

“You know that’s a good idea!” screamed Olav jealously because he couldn’t come up with that idea.

“No! Don’t consider that idea it was just a joke.”

“Too late,” said another scientist. “Olav made up his mind now it’s too late to stop him.”

“Hey guys I’m going to check up on the plans again,” said Olav walking to the small silvery color building that he and his scientist’s build.

“Why? Did you forget how to make a spaceship?”

“Of course not!” mumbled Olav secretly to himself.

Inside the building Olav examined the plans again for any flaws, “Currently we have built 12 ships already (it was very easy because of new technology) and each ship can hold about 100,000 people there a lot of people in Antarctica, but there is about 4,000,000 people in Antarctica it could have been far more, but because of limited space there was a birth control system of 2 children per parent only. Since there were 2 days left after today we can hold 3,600,000 people we have to either stuff the remaining 400,000 or leave them for dead. Oh yeah the food supplies... we also need to gather the people here soon too. ”

“You don’t have to worry about that, because Arthur’s wonderful scientist, me will take care of that!” said a mysterious voice behind Olav.

“What! Who ar... OW!” cried Olav in pain as he was hit in the back with something metallic, and was knocked out conscious on the cold floor.

“Okay better prepare for the next plan like ordered from Bango...” laughed the scientist-clothed person.

Later on the investigation Olav sent to investigate the bush came back. They wanted to speak with Olav, but couldn’t find him. They talked to the other scientist to see where Olav is, and went to look for him in the building. That is when they found Olav unconscious on the floor with a bloody head. They got first aid and helped Olav regain conscious.

“Uh...what happened?” moaned Olav. While he was slowly regaining conscious the scientist asked him what happened.

“Olav who did this to you?” asked a scientist.

“Uh... I think he mentioned he was one of... Arthur’s scientists!”

“What! I knew he would try to get revenge for what you said to him!”

“But isn’t this going to far, besides he would usually “mentally destroy” you not physically,” replied another scientist who had once been “mentally destroyed” by Arthur he was sent to the

hospital for a whole week, just because he argued a bit with Arthur.

“Anyways...” said Olav as he was once again interrupted by a loud scream. Then explosions. Everybody except Olav ran as fast as they could to check out what happened. Olav slowly walked outside from the building and his face was in shock just like everybody else. Everywhere were the destroyed pieces of the 12 spaceships they were building, along with some dead bodies of a few unlucky scientist who was hit by the shockwave of the explosions.

“What happened here?!” said Olav in shock.

“We don’t know!” calmly replied a scientist as he was trying to suppress his shocked feeling.

”Who could do such a thing?!” nobody knew the answer. Nobody moved.<sup>4</sup> The first person that moved was Olav.

“Let’s bury these guys and continue working,” said Olav in suspense.

“Yeah you’re right,” said the scientists one by one as they grab shovels and started digging. After the holes was dug they began to drag the

---

<sup>4</sup> Of course they were moving like breathing and stuff, but not taking a step forward.

freezing bodies to their pit in which they will hopefully rest in heavens, like you and me sleeping in our bed. Everyone was quiet until a scientist leaps and surprise.

“Oh my god!” yelled that scientist.

“What’s wrong?” asked Olav not really caring much.

“Look at this body.”

“Hey this looks like a new scientist uniform Arthur and his group probably made!” shouted Olav.

“How do you know if that’s Arthur’s new uniforms?” asked a scientist.

“That’s simple, because this uniform has the word Argo”

“So?”

“I wouldn’t expect you to know this, but Argo is Arthur’s favorite word and it isn’t word at all he just likes it,” said Olav in suspense. Everyone was quiet looking at the unfamiliar dead scientist test dead on the ground wearing Arthur’s new uniforms.

## Mission 6: The mysterious enemy

““S ir, your orders were  
successful B-1 and B-2  
deaths brought destruction on  
Arthur and Olav.” Said a  
dark cold-hearted voice.

“Perfect,” replied another voice.

“Bango your shri... WHA” cried another  
person as Bango jumped at him and took the  
shrimp.<sup>5</sup> Bango ate at the speed of light. In 52  
seconds he devoured a large bowl that is 1 foot by 1  
foot by 1 foot and is filled with shrimp.

“Congratulations that was your newest  
record,” said one of the voices.

“Hah hah hah shut-up stupid B-12,” replied  
Bango coldly. Normally people would argue but B-  
12 knew that if he did he would be dead if he tried  
to argue. Bango body was slim he had cold as rock  
color eyes, his face is normal, he’s stronger then

---

<sup>5</sup> Yes when the guy said he brought Bango’s shri...  
he means shrimp.

most and as you can see he's obsessed over shrimps.

After more shrimp arrived, Bango devoured it all.

"Now on to the meeting!" Laughed Bango joyfully. "With Arthur we were successful, but it was quicker then planned, but I expected this from my old buddy Arthur, what do you guys think?"

"Well Arthur... seemed to noticed B-1 rather quickly of course, he never noticed the F.O.U.N.D. (Follow Our Unit's Nucleus<sup>6</sup> Device)," said one person who was in charge of the F.O.U.N.D.

"Here is the video, I'll insert it into this old non-traceable television<sup>7</sup>."

After getting everything set up (which took 12 minutes) the group watched the film.

"This is B-1," said B-1, "I am going to start my mission." Rustle rustle

"Perfect Arthur noticed me." After the rustling B-1 ran around the camp unnoticed by everyone else, and saw Arthur and some other

---

<sup>6</sup> The nucleus is your DNA so this machine tracks the person's DNA.

<sup>7</sup> Now in the future you can easily track people with the new televisions.

scientist went to investigate the noise he made. Once they left B-1 waited till only a couple of person were out working on the laser cannon. He walked up to a randomly selected person and told him to accompany him for a while. He led that person to a nearby road and grabbed his S.W.O.R.D (Slashing Wildly On Random Device) and whacked him on the head. Afterwards he went into a white color building that was obviously quickly built by Arthur and his group. He found some spare scientist uniform, and wore it. He then pretended to construct the laser cannon, but he was actually removing some parts. After a while he heard a scream of what happened to Bob. He had hearing enchantments so probably no one else heard it. He went back to look at the plans in the building, eventually a scientist came and told him to meet at the entrance to the door. They were looking for Arthur apparently. They decided to check the laser cannon. Once they arrive B-1 shouted.

“Arthur have you gone mad!” shouted.  
“Why did you destroy the laser cannon!?” Then everything froze. Bango clicked the pause button on the remote controller for the television.

“Idiot don’t announce something so obvious,” laughed Bango in pity as he continued the television. ”Even my other old friend, Olav would of caught onto this!”

The video then continued.

“Hmm,” said Arthur looking quite entertained. “How do you know it’s destroyed? It’s true some parts are missing that were originally there, but they aren’t visible at your angle of view so how would you know the parts are missing?”

“Oh shoot. I forgot about this part,” B-1 whispered to himself.

“That means you’re trying to frame me, but I’m not stupid to fall for that trick.”

“You’re not as stupid as you look,” laughed B-1 desperately thinking of a plan, and then in a flash he got one. “Right I’m one of Olav’s scientist!”

“Olav’s!?! I knew he didn’t like me, but why is he doing this!?” cried Arthur in surprise and shock.

“I’m going to send us to kingdom kong!” said B-1 as he grabbed 3 bombs and threw them at the laser cannon. It made a humongous explosion, as big as the moon.

“Ahhhhhh!!!!!!” cried everybody including B-1 as he embraced death itself. Then the whole entire screen went fuzzy.

“HAHAHAHAHA B-1 that was pure brilliance still you deserve to die!” laughed Bango showing no sign of being saddened that his own man died.

“Sir, shouldn’t we honor his brave death?” Asked a voice in the cold night.

“Who cares aren’t you guys like me?” evilly asked Bango. “We were tossed out by them including me, you guys should be happier!”

“Well anyways here is the other video with Olav,” said a soldier.

“Okay let’s see what my old buddy Olav can do!” laughed Bango. “Although I doubt he would accomplish much.”

“HAHAHAHAHAHA this is B-2 HAHAHA I’m beginning HAHA the mission.” Laughed B-2 trying to suppress his laughter. “My sides hurt so bad from this laughter.” Everyone was wondering why was B-2 laughing so hard then they saw it.

“So umm Olav where are we going?” asked a scientist.

“Umm...” stumbled Olav as he tripped onto the floor.

“Oho oho” cried a bird that was flying around.<sup>8</sup>

“Hey where did that bird come from?” asked a scientist. “They should be in the artificial forest that is filled with a lot of junk we threw away.”

“That’s it we’ll go to the artificial forest!” cried Olav as he got up from the ground. “There should be a lot of parts to build the spaceships!”

“Yeah that’s another great idea from you, Olav the Coward!” laughed a scientist

“Thanks, hey that’s not funny!”

“Oh sorry I meant Olav the Former Coward.”

“HAHAHAHA,” laughed the entire scientist.

“Come on guys its not that funny!” After this scene the video was paused. Everybody almost died of laughter<sup>9</sup> including Bango.

---

<sup>8</sup> Again oho means idiot/ stupid in Japanese and sometimes in television when a character does something idiotic a bird would be flying by saying oho oho (idiot/ stupid idiot/ stupid)

<sup>9</sup> I’m serious. They almost died because of it.

“That was pathetically hilarious!” laughed Bango and everybody else agreed with him. “Okay let’s see what other mistakes this blundering fool will do.” The video was then continued.

“I’m not listening lalalalalal~,” whispered B-2 to himself. “I won’t laugh lalalala~.”

“Oh bubble sticks! They left!” noticed B-2 after talking to himself for a while.

B-2 follows Olav’s footsteps, like a fox tracking a rabbit. B-2 carefully matches his footsteps with random footsteps so he wouldn’t be caught on in the future. B-2 arrived in a near-by forest that he had never seen before.

“I guess this is the artificial forest Bango was talking about,” said B-2 in shocked of the beautiful scenery he was looking at. “Hey! There’s Olav’s group.” So B-2 continues to follow Olav for a while. Eventually they stopped and established a base and started construction of their space ships. B-2 waited for his chance and luckily for him a bush far from him rustled a bit. Then he heard Olav and a scientist talk.

“Hey,” whispered Olav to a scientist, “is that bush moving a bit.”

“Hmm I believe it is Olav,” whispered back the scientist. “I know you’re worried. Let’s check it out.”

“Umm...” said Olav nervously slowly stepping backwards.

“I know I know, you’re scared, I’ll get other people,” said the scientist. And he did as he said he gathered five other scientists, and went to investigate the bushes.

“Hey guys!” cried Olav. “Once the other people come back we should create a codename system so I can call you each one individually.”

“Okay we’ll number off from 1 and add a O in the front.” Laughed a scientist jokingly.

“You know that’s a good idea!” screamed Olav jealously because he couldn’t come up with that idea.

“No! Don’t consider that idea it was just a joke.”

“Too late,” said another scientist. “Olav made up his mind now it’s too late to stop him.”

“These guys are clowns dress as scientist!” laughed as quietly as B-2 can. Bango and his group also laughed. B-2 waited longer Olav started to walk into the people-less building.

“Hey guys I’m going to check up on the plans again.” Said Olav walking to the small silvery color building that he and his scientist’s build.

“Why? Did you forget how to make a spaceship?”

“Of course not!” mumbled Olav secretly to himself. B-2 went into the building from the back door. There he heard Olav looking at the plans and mumbling things.

“Currently we have built 12 ships already (it was very easy because of new technology) and each ship can hold about 100,000 people there a lot of people in Antarctica, but there is about 4,000,000 people in Antarctica it could have been far more, but because of limited space there was a birth control system of 2 children per parent only. Since there were 2 days left after today we can hold 3,600,000 people we have to either stuff the remaining 400,000 or leave them for dead. Oh yeah the food supplies... we also need to gather the people here soon too. ” While Olav was talking B-2 was thinking of a plan and came to the conclusion that he should pretend to be part of Arthur’s group. When Olav was done talking B-2 went behind Olav and revealed himself to Olav.

“You don’t have to worry about that, because Arthur’s wonderful scientist, me. Will take care of that!” said B-2

“What! Who ar... OW!” cried Olav in pain as he was hit in the back with a S.W.O.R.D. (Slashing Wildly On Random Device)

“Okay better prepare for the next plan like ordered from Bango, but I wonder if what I did was right knocking Olav out. Oh well, the scientist uniforms has a very high chance to protect the wearer.” laughed B-2. After that he found a room where there was some scientist uniforms. He added his own designs on the uniform and added the word Argo, Arthur’s favorite word from what Bango said. Then he wore the uniform. He then left to hide by a completed space ship.

After waiting for a long time he heard some people looking for Olav. He waited for them to find Olav and provide treatment for him. After awhile, B-2 jumped out of the space ships.

“Say bye to your lives!” Shouted Olav to a couple of scientist that was at his location and threw a bomb at them. He threw more bombs at the space ships and the scientist by it. Then with the finishing blow he threw a bomb below him and he

was blown up. Then once again the screen went fuzzy.

“Haha B-2 was smart!” smiled Bango.

“Following my orders and framing Arthur as a bonus! It’s a shame he’s dead.”

“He’s smiling!” said one of the B units.

“Should we have a funeral, sir?” asked B-23.

“B-whatever number you are, if we were to have a funeral for every dead soldiers we would have a lot of funerals!” shouted Bango grabbing the tape from the television, and smashed it with just his hands.

“Wow! Sir that was made out of metal how did you do that?” asked a shocked B-23.

“None of your business moron!” laughed Bango even though it wasn’t a joke.

“Yes sir...” said B-23. “Anyways about the next assault...”

“Oh yes!” laughed B-23.

## Mission 7: Troubled Arthur

**A**fter the explosions and the loss of the laser cannon things weren't going well.

"Come on you slackers make a better one!" shouted Arthur.

"We're working as hard as we can," whimpered a scientist. "Besides after that explosion with Olav we have been messing up on the cannon, this is the 45<sup>th</sup> one. You're making us work too hard."

"No I'm no...*ah...ah...ah...achoo*" sneezed Arthur.

"Are you sick Arthur?" said one scientist

"No I never get sick, somebody is probably talking something about me behind my back<sup>10</sup>."

"Anyways back to the subject," said another scientist.

"Yeah! Why don't you try making it?" said another scientist

"Fine! I will," said Arthur as he got up from his seat.

"You guys just get the parts in a pile."

---

<sup>10</sup> You'll see why Arthur said that just read on.

”Oh we will see!” evilly said by one of the nicest scientist that was angry with Arthur and you don’t see that everyday. With speed as fast as lightning Arthur equipped with his speed enchanting shoes: S.P.E.E.D. (Super Paced Eating Electric Device)<sup>11</sup> he built about a forth of the machine in a non-stop 5 hours.

“See!” said Arthur quite happy of his work.

“Wow!” said some scientists shocked and thought some scientist to proud to admit it. “It’s so...perfect!”

“Well of course!” said one of the scientists that didn’t say wow. “I never doubted Arthur in the first place”

“That’s not true I think you doubted me like the rest of you imbeciles.” Said Arthur without any doubts that he was mistaken. “Well, whatever take twenty<sup>12</sup> people.”

“Finally!” cried a scientist.

“How long do we have left?” asked another scientist.

---

<sup>11</sup> Basically S.P.E.E.D. are shoes that make you move faster, not some food-eating device. However it does make you have the urge to eat any food you pass by, so clear the food.

<sup>12</sup> Take twenty means to take a twenty-minute break.

“Hmm...1 day, 23 hours, and 20 minutes.”

Answered a scientist with fear in his voice.

“Now I don’t feel like taking a break.” Said the scientist.

“You can’t take a break A-23,” said Arthur, “because the twenty-minutes break is over.”

“What!” said A-23 looking at his watch.

“Your right! Oh man I wasted my break.”

“Oh well A-23, back to work people!” screamed Arthur. With that the scientists came back from their twenty-minutes break rejuvenated, re-attitude, and ready to work. The scientists went back to work. They wondered how Arthur could do perfect work in only 5 hours, but they just kept quiet and follow the plans until one person noticed Arthur was nowhere to be found.

“Where’s Arthur?” asked a scientist.

“Yeah where is he?” asked another scientist. It turns out that nobody knows.

‘Oh no, maybe something happen to him like what happened to me!’ cried the scientist who got knocked out by B-1.

“Oh no!” cried a scientist jumping to conclusions. The entire scientist except for a few went to search for Arthur in the forest.

“ARTHUR IF YOU CAN HERE ME, RESPOND!” shouted the entire scientists.

“Hey there’s light in the building we built,” noticed a scientist. The entire scientist went to the building they gathered at the front of the door like dust gathering under the couch. They slowly and quietly went into the building. Slowly pondering if they should get weapons. They burst into building, and saw a horrid sight.

“Oh my god!” said a shocked scientist.

“The horror!” cried another scientist. What they saw was... Arthur. He was eating doughnuts from a large pile of doughnuts. He was eating unlike his old proper self. He was eating about the same speed as him building a fourth of the laser cannon. The scientists were staring dumbfounded as Arthur was eating the doughnuts until Arthur noticed them.

“What are you guys doing here?!” shouted Arthur nervously, because he was exposed.

“Arthur you...are addicted with doughnuts!”

“So!” said Arthur beginning to eat the doughnuts as fast as a cheetah running.

“Okay... so where did you get the doughnuts?”

“I brought it with me!”

“Okay...” said the scientists. “We’ll leave you with your doughnuts.” With that the scientist left. They never expected Arthur to have such a weakness. They were shocked. When the scientist came back they told the story to the other scientists on guard. They were too shock to even laugh about it. They worked quickly and carefully not wanting to mess up the laser cannon. They were doing great until they met a problem.

“Oh great!” moaned a scientist.

“What’s wrong?” responded another scientist.

“We ran out of parts.”

“WHAT!?” yelled out the scientists.

“Well let’s go find more parts in the forest.”

“That will be hard.” Said another scientist.

“Why?”

“Because Arthur has studied where all the parts are a long time ago, so that’s why we have so many good parts.”

“So basically we have to ask that doughnut eating freak for help?”

“Yes.” With that the one of the scientist was sent to notify Arthur the “doughnut eating freak” for

help on locating parts. The scientist step in and called to Arthur.

“Hey you doughnut eating frea...I mean Arthur we need to find more parts,” said the scientist.

“Okay...A-4.” Mumbled Arthur as he got up from what once was a giant pile of doughnuts. They went outside and begun their elaborate plans.

“Okay the best place to find grasslanite, euphoritonite, and ralphanite<sup>13</sup>...is at the junk pile over here at the northwest,” pointed Arthur on a map of the artificial forest.

“Okay we’ll go there right now,” said A-1-A-6, as they left immediately faster then a pack of wolves hunting their prey.

\*Swish\* \*swish\* \*swish\*

“Looks like a strong wind is coming from the northwest,” said Arthur as he enjoyed the blow of the breeze.

“Wow what bad luck to go against the wind,” mentioned A-7.

“Yes that’s true,” said Arthur hoping it wouldn’t be a bad omen...

---

<sup>13</sup> They are all metallic material needed to build the laser cannon.

## Mission 8: Olav's rejuvenations

““H<sup>ey O-0<sup>14</sup>,</sup>” shouted  
Olav, “we finished  
a space ship!”  
“You’re

the boss Olav, you should be making orders and  
organizing things,” said O-0 getting louder per  
word. “AND NOT BE WORKING ON THE  
SPACE SHIPS!”

“Umm...” mumbled Olav,

“Oh well,” Said O-0 “Anyways break time  
people!” As O-0 said everybody went to take a  
break. Olav went to O-0.

“Hey O-0 how many more do we need to  
make?”

“Well, we got all the materials for survival  
on the space ships for all the people and it would  
last us for about 5 years.”

“Okay that some good news I need to hear.”

“I can’t wait for Arthur and his scientist to  
beg for forgiveness, especially after what he done,”

---

<sup>14</sup> O-0, B-0, and A-0 are the sub leaders.

said O-0 as he remembers the incident with B-2; of course he thinks B-2 is part of Arthur's group.

"Well, I'm going to grab some grub."

"Okay, see you later." Said O-0 as Olav walked away to get food. Later on Olav appeared again from the building they built bringing a giant stack of chocolates. He sat on the sand covered floor below the high tower O-0 is going to the top. Olav started stuffing himself with chocolate.

"Hey Ol... what happened to you!?" shouted O-3. Looking at Olav covered with chocolate in which he thought was mud from fighting with somebody. "Who did this to you?!"

"Mumghh?!" said Olav his mouth filled with mouth watering delectable chocolates; Olav quickly swallowed the chocolates in his mouth. "I'm ea...*cough, cough* eating chocolate, you want some?" Olav choked on the chocolate.

"No thanks, so how many boxes of chocolate are there?" Wondered O-3 counting the boxes. "12?"

"No" replied Olav as he moved a bit revealing even more stacks of eaten chocolate boxes. O-3 twitched and quickly and quietly left.

Everything was quiet for Olav until a couple of scientists came.

“Hey Olav bad new,” said the scientists.

“Same here I have bad news too,” said Olav.

“What is it Olav?”

“We ran out of chocolates!” declared Olav as the scientists stumbled onto the ground. “What about you guys?”

“Apparently we ran out of materials to use.”

“Okay let’s go look for materials.”

“You’re not staying here at camp?”

“And getting knocked out by Arthur’s goons?” said Olav “No way.”

“Well whatever.” Olav and co went to a map and examined it, while another scientists gathered a group to get the materials with Arthur.

“Let’s see we need to find grasslanite, euphoritonite, and ralphanite where can we find these materials?”

“Umm...you know we could go to the junk pile southeast from here,” mentioned Olav even faster then Arthur thought of the locations.

“That’s is probably even faster thinking the Arthur.” Said O-0.

“Well whatever, let’s go.” Said Olav. Then Olav and a few selected scientists O-1-O-6 went southeast with the wind propelling these adventurers forward like their destinies.

After walking eastward for a long time, the group found a couple of rocks to rest on.

“You know my ancestor’s use to live at North America in the so called country of the free,” said O-2

“You mean the United States of America, or USA?” answered Olav, thinking about his own ancestors.

“Yeah I think that’s would it’s called.”

“We aren’t here to chitchat people!” shouted O-2.

“Fine let’s talk as we go.” Said Olav as he said his solution to being bored to death and getting tired of walking.

“What was the cause of global warming?” asked a confused O-1.

“You’re a scientist, how would you not know what caused global warming?”

“I’m a space scientist not a scientist who knows about global warming.”

“Fine I’ll explain it to you O-1,” said Olav,  
“Umm...”

“You don’t know it either do you Olav?”  
asked O-2

“Yes,” whimpered Olav facing the floor in  
shame.

“Okay I’ll explain,” lectured O-2 “long time  
ago people thought that pollution was destroying a  
layer of the atmosphere. Of course they were  
wrong the real cause was the radiation caused by  
fire, every time there is fire the atmosphere would  
be opened for the heat to pass the atmosphere, and  
eventually one day the atmosphere couldn’t closed  
anymore.”

“Wow!” muttered Olav and O-1 together at  
the same time.

“Hey this killed twenty-minutes of out  
time!” declared O-3. The group cheered and took  
turn using the G.P.S. that was technology from the  
20<sup>th</sup> century to keep track of their current  
destination.<sup>15</sup> Eventually the group arrived in the  
abandoned junkyard, or they thought that it was  
abandon.

---

<sup>15</sup> Yes we do have something called a G.P.S. If you  
want to know what it is do some research.

“Hey did you here a noise?” asked Olav slowly creeping back.

“Yeah I think it’s a ghost.” Answered O-1

“AHHHHHH” shouted as he started running away.

“Quiet you fool,” whispered O-1 as loud as he can, “it was just a joke.”

“Oh,” said Olav as he walked back in shame.

“Apparently whatever we’re hearing hasn’t noticed Olav’s loud scream.” Whispered O-2. The group quietly tiptoe to where they thought they heard a noise. To there surprise they saw other human beings, plus they were wearing scientist uniforms. They knew none of their own men would follow them let alone beat them.

“These guys must be Arthur’s scientists!” concluded Arthur.

“Okay, but what are they doing?” asked O-4.

“Hey aren’t they holding some grasslanite, euphoritonite, and ralphanite?” noticed O-5

“They’re trying to stop us, but how did Arth... oh wait if it’s Arthur it’s possible.” Concluded O-6.

“Let’s try to capture them and then interrogate them about why they attack our base!” said Olav to the group. “There are 4 of them I think if they’re not somewhere else.” They all secretly vowed to get revenge and they all silently agreed to attack. The group found some items lying on the ground and threw them at Arthur’s scientists. They were hit and look like they were almost knocked out from the whacked from the items. To finish everything off O-3 grabbed a B.A.S.E.B.A.L.L. (Bombing Allergens Super Exclusive Bossy Acne Loitering Loops) and smacked it at the scientists knocking them out.

“You know O-3 you were suppose to throw that B.A.S.E.B.A.L.L.,” informed Olav.

“You are!?” said O-3 surprised at the B.A.S.E.B.A.L.L.

“Well anyways let’s bring them back to base to interrogate them.” The scientist returned to their base and tied their prisoners to a chair also taking their grasslanite, euphoritonite, and ralphanite. They waited for Arthur’s scientists to wake up, and eventually they did.

“What happened?” moaned a scientist.

“He’s getting up!” shouted O-2 getting excited for knowing the truth of why Arthur attacked them.

“What do you guys want?” asked Arthur’s scientist who fully regained his conscious. “Are you going to blow me up like what you did before with my friends?”

“What’s he talking about?” asked Olav

“You know what I’m talking about!” shouted the tied scientist.

“Hey you’re our prisoner so answer our question,” shouted O-0, “why did Arthur order a attack on us!?”

“What are you talking about you attacked us, and besides what’s your proof that we attacked you?”

“You want proof?” shouted O-0, “here’s proof Olav bring “it” over here.”

“What’s “it”?” asked Olav confused.

“What’s “It”? “It” was the item from that incident!”

“Oh that’s what “it” is,” understood Olav as he went to get “it” from the building his group built. “I got “it”!”

“Here’s your proof,” shouted O-0 as he took “it” from Olav, “this uniform that says Argo, which is Arthur’s favorite word.”

“Are you blind?” asked Arthur’s scientist, “I’m not wearing that uniform!”

“What?” noticed O-0, outraged.

“It’s true,” said O-1.

“Listen to me,” said Olav to Arthur’s scientist, “we didn’t blow your base up and you didn’t blow us up correct?”

“I guess so.”

“That means somebody else is framing us.”

“This is bad,” mumbled Arthur’s scientist, “Oh and can you untie me?”

“Sure” said Olav without a doubt that Arthur’s scientist may be trying to trick him.

“Olav stop it can be a trap!” shouted O-0.

“Too late” said Arthur’s scientist, “HAHAHAHA! Fortunately for you I’m telling the truth.”

“Okay let’s wait for the other three scientists to wake up and go to Arthur.” Olav waited for the other three scientists to regain conscious and they led Olav to Arthur’s base hoping that nothing bad would happen.

## Mission 9: The mass explosion plan

“*H*ehheheh! Now’s the time  
to have some fun!”  
shouted Bango with his  
evil mechanical like

laugh. “We have less then 2 days left, let’s make  
one heck of a party!”

“Yeah!” agreed everyone.

“*Hehehehe!* Okay divide into groups of  
three.” With that order every soldier in Bango’s  
group divided into three groups.

“You idiots got it all wrong,” shouted  
Bango. “We need one group to have the least  
amount of people.” With that the soldier followed  
orders, because they know Bango will not hesitate  
to kill them, he is that insane to kill his own  
teammates.

“We’ll begin this operation now!” shouted  
Bango as he joined the smallest group and B-0 and  
the new B-1<sup>16</sup> joined the other two groups.

---

<sup>16</sup> Yes they replaced the dead B-1, because the  
whole purpose of the code name is to get people to

“Our operation is...” whispered Bango to the groups.

“That’s going be fun!” shouted the groups in evil laughter. So like whatever Bango said to them B-0 and B-1’s group left their campsite.

“Sir how are we going to see where are we going to do “it” to Arthur and his moronic side kick Olav?” asked B-42.

“Don’t worry your ugly little face about it!” laughed Bango with evilness. “I have a radiator tracker for preparation for “it”!”

“Yup as brilliant as ever just to be expected of a formal head scientist from space technology.”

“Zip it, I want to forget that isolated place!” shouted Bango annoyed.

“Yes sir...” whimpered B-42.

“Oh by the way what’s your code name?”

“It’s B-42 sir.”

“Right, well, whatever,” Ignore Bango. The group waited for hours until a beeping noise was heard. Bango with his smile so wide laughed an

---

do something as quick as possible, so it would be weird if you call for B-1 to do something, and B-1 never showed up, because he’s...in a better place.

evil laugh that shouldn't belong to a person who smiles so wide like him.

“It's time to begin!” laughter Bango looking at his black shiny watch, following the radar it's showing to the location of the radiation.

## Mission 10: The discovered truth

**A**rthur was worried it's been hours and the scavenger group hadn't return yet.

“Where are they we only have 1 day 10 hours left,” Said Arthur in a worried voice “plus the people here are going crazy with fear, but on the plus side crime have been reduce, because of fear.”

“HAHAHAHAHAHAHAHAHAHA,”  
laughed voices.

“Whose there!” looked around Arthur and saw what he thinks may be Olav's group.

“We're from Olav's group,” smiled the strangers “and we are going to have some fun with you guys!” As they said the strangers (hint: from the previous chapter) charged toward the almost perfected laser cannon that has been going so perfectly.

“You're not planning to destroy the cannon!” shouted Arthur as he ran toward the group of strangers trying to stop them, but it was too late.

However Arthur was fortunate enough to notice something, and that something is radiation exploding bombs strap onto them.

“EVERYONE RUN FOR YOUR LIVES!!!!!!” shouted Arthur as loud as he can. Everyone knows Arthur never jokes around so they ran for their lives. Unfortunately some were too slow. The group of strangers press a button on the bombs strapped onto them, and were all close to things of value the scientists, the laser cannon, and materials that may or may not be needed. They blew themselves up, causing radiation to be spread everywhere. There was smoke everywhere. After the smoke cleared. There were dead bodies, destroyed materials, and the worst of them all the almost finished perfect laser cannon was destroyed. Even more news came. Just on cue Olav finally arrived to Arthur’s base following his troops, which had been captured.

“Arth... what happened here!?” stumbled Olav with fear and confusion.

“You, Olav why did you do this!” shouted Arthur getting ready to fight Olav and receive pain from explosions and other devious devices at Olav’s possession.

“Wait, Arthur Olav’s innocent!” shouted A-

3.

“You guys why are you with them?”

“To make a long story short, Arthur, we were captured, then interrogated, and found out that they didn’t bomb us, and they said we bomb them, but we didn’t.”

“So you’re implying that there is a third force interfering with us?”

“Exactly” said A-3.

“Where’s the proof?”

“Here’s the proof hey Olav bring “it”!”

“What’s “it” again, oh wait never mind I’ll bring “it” here.” Said Olav getting “it”<sup>17</sup> “Here!”

“Thanks” said A-3 taking the uniform.

“Here Arthur this is your proof.”

“I’ve never seen this uniform before.” Said Arthur.

“Right and they claimed that the person who bombed them was wearing that and claimed to be part of Arthur’s group.”

---

<sup>17</sup> If you still don’t know what “it” is you can read the first chapter with Olav solo and the second chapter with Olav solo.

“Okay I give in,” given up Arthur, “well I’m sorry for accusing you Olav.”

“It’s okay I suspected you too.” Said Olav, sorry too. “Anyways what happened here?”

“If what A-3 says is incorrect you guys came and bombed us again!”

“WHAT!!!” shouted everyone in Olav’s group in suspense of being blamed again.

“Oh no!” shouted Olav.

“What’s wrong Olav?” asked O-0.

“If the third force knows where Arthur’s base and already bombed it and we been bombed too, doesn’t that means the third force is going to bomb our base!”

“Oh no!” whimpered everyone.

“I’m going back!” shouted Olav.

“Wait Olav” shouted Arthur.

“Arthur you can’t stop me.”

“Wow Olav you changed a lot!”

“Thanks so what were you sayi- hey compliments won’t help you either, and I said you can’t stop me!”

“No what I mean is I’m coming with you.”

“Oh, but what about luggage and other thi-”

“Look Olav everything was blown up, so I have nothing, let’s go!” declared Arthur as the group ran back to the base as fast as possible, but before Arthur left he noticed a letter on one of the strangers hand. He took it and chased after Olav’s group and his group.

# Mission 11: Preventing the impossible

**T**he group had finally arrived near Olav's base, and a lot of them became friends again. Once they entered they saw dead bodies, injured scientists, destroyed materials, and a lot of the space ships were destroyed.

"No! We were to late!" shouted Olav.

"Olav calm down!" shouted Arthur, "it's impossible to prevent the impossible."

"Let's just do what we can." Said O-0.

"Yeah you're right." Said Olav calming down. "Hey what's that letter in that guys hand that's wearing the Argo uniform." "The group approached the letter with caution, and to Arthur's surprise the letter looked very familiar to the letter he found. He grabbed it and opened it.

"Hey Arthur what are-" shouted Olav in surprise.

"Quiet," shushed Arthur as he read out the letters.

---

Dear Arthur,
You must have some brains since
reading this letter. Anyways to the point
going to give you one heck of a party!
Signed with much hate
B

---

“This is the letter from here,” said Arthur  
reading Olav’s letter.

---

Dear Olav,
You must have some brains since
reading this letter. Anyways to the point
going to give you one heck of a party!
Signed with much hate

---

“What does this all mean?” wondered everyone all looking at Arthur for a reason.

“I don’t know but we don’t have time to worry about this,” answered Arthur to everybody’s question, “because we only have exactly 1 day 2 hours and 1 minute left!”

“What!” shouted Olav; “with all the damage that was dealt we can’t possibly finish the spaceships now!”

“That’s the same with us,” said Arthur calmly. “We have no choice we need a new plan, but that’s impossible I can’t think of another plan.”

“Hmmm...” thought Olav waiting for a plan to come, “I got it! Arthur you and your group can make a weaker laser cannon so we can lessen the blow of the meteor and my group and I will make space ships.”

“Olav that’s brilliant when did you get so smart?” said Arthur in delight and jealousy. “We also have no choice but to ask all of the citizens to help, we need more people.”

“Right” screamed Olav in excitement,  
because there is another chance to live.

“Olav’s a lot braver now too.” Remarked O-  
4.

“No time for jokes now” said Arthur as he  
ran back to the place where this story started. He  
ran all the way to the A.N.D. and set it the  
worldwide.

“Hello citizens of the Antarctica we want  
everybody to come to space technology,  
immediately, we need your help!” With that being  
said Arthur waited to greet all the people that came.

After a short wait a lot of people came.  
They all knew who Arthur is, and they know if  
Arthur makes an announcement it must be very  
important. Arthur led all the people to the artificial  
forest. There they were given instructions on what  
to do. Everything was going perfect. 7 spaceships  
are being built per 3 hours (mainly because a lot of  
the experience people died and the citizens aren’t  
that great, but they help a lot). The laser cannon is  
also going perfectly Arthur had no complaints.  
Everything was going well there were only around 6  
hours left and everything is perfect. The people  
with machinery pushed the space ship and laser

cannon to the location they're going to be launched at. Everything was going well, to well...

"I can't believe it we're actually going to make it!" shouted Olav in relief.

"I don't think it's going to be that easy!" shouted an evil unfamiliar voice.

## Mission 12: The final boss

““W”ho are you!” said Olav  
turning around. “I  
know you  
your...ummm...”

“Oh well I didn’t expect you to remember  
anyways.” Said the person, he was in a group and  
they had L.I.Q.U.I.D (Lustrous Iced Quivering  
Usage Ices Dummies)<sup>18</sup>

“Olav that’s Bango,” mumbled Arthur  
holding his hand up so Bango won’t shoot. ”So  
Bango why did you leave space technology?”

“Bango! You mean that Bango who left a  
couple of days before we heard about the meteor?”  
asked Olav.

“Yes him.”

“How did you find us?” shouted Arthur.

“Well I have a radiation tracker that tracked  
the radiation you got from the explosions from the  
bombs,” explained Bango,“ and there’s a lot of  
noise and a big group of people in a scientist only  
area. ”

---

<sup>18</sup> Basically it literally freezes you.

“Why are you doing this? If it’s about entering our spaces-”

“I don’t care about surviving!” shouted Bango with a laugh, “I just want revenge for what you guys did to me”

“What did we do to you?” asked Arthur, in very few cases confused.

“This is what you did to me” shouted Bango as he removed a sleeve from his left hand, what was revealed was a mechanical hand, “you guys made me full into a pit of spikes it’s a miracle that I lived! Then some other scientists secretly tried experimenting with me with mechanical body since they assumed I was dead, but no I was conscious, and now I want revenge!”

“So that explains why he is so strong” thought out loud B-4 “He’s half machine.” Everything was going bad Arthur, Olav, Bango, the scientists, and a lot of other people (not as much as the people in the space ships ready to leave) were still here. Arthur needed to think quickly. Then he got a great idea. Arthur grabbed his glasses and threw them on the floor near Bango and his group.

“Those glasses are explosives” shouted Arthur now glassless.

“WHAT?” shouted Olav, “ARTHUR WE’RE ALL DEAD NOW!”

“Quiet Olav,” commanded Arthur. Arthur grabbed a piece of rock on the floor, and threw it at the switch that launches the laser cannon while Bango and his group was still confused. Next Arthur told everyone to run for his or her life. Unfortunately Bango noticed them running and started shooting his L.I.Q.U.I.D., which is in shape of a water gun. Many people were shot. Arthur made it to the space ships, and many others did too. However Olav was hit on the foot.

“Olav!” shouted Arthur as he quickly jumped out of the spaceship, and grabbed Olav. He pulled as hard as he can, but Olav was stuck.

“Arthur just leave me!” shouted out Olav.

“I’m not leaving my best friend behind.” Shouted Arthur. “Wait a second I still have the S.W.O.R.D. I found and the glasses are just a accessory.” With that Arthur cut Olav free from the ice. They quickly evaded the ice and jumped into one of the many spaceships. Arthur activated the automatic launch off. There they waited for the meteor to collide on their beloved Earth.

"You know that meteor looks kind of strange," announced Olav, but nobody cared.

Arthur and Olav and the rest of the million of peoples waited for years to come back to Earth. Eventually that day came. The people went back to Earth, and started rebuilding. Everything was going well, except for a fatal day. Arthur went to find some materials for the construction of the cities. He searched for destroys parts of things in the new forest that grew in the crater. There he encountered something. Nobody knew what happened with him after words. All they knew was the words humanusanima that word was written in blood that was believe to be Arthur's. Arthur was believed to be dead. Many moaned for him for being the savior of the world. There were also new mutated animals that looked similar to humans and animals thus Arthur named them humonusanima. Another thing, there was also a rumor that Bango sneaked onto a spaceship and is still alive.
